

REPORT ON REGISTRATION OF BIRTHS AND DEATHS 2019

REGISTRY OF BIRTHS AND DEATHS Immigration and Checkpoints Authority Singapore

PREFACE

Under the Registration of Births and Deaths Act (Chapter 267), the Registry of Births and Deaths has been charged with the responsibility of registering all live-births, still-births and deaths in Singapore.

The Report on Registration of Births and Deaths, 2019 is the 32nd publication in the annual series by the Registry. The Report aims to provide an overview of the annual changes in the population, births, deaths and other vital statistics. The statistical tables and charts on vital statistics will be of interest to academics, demographers and medical professionals. Specimen certificates of and procedures for the registration of births, still-births and deaths have been included in the annexure.

The Registry of Births and Deaths gratefully acknowledges the assistance and contribution of the Ministry of Health, the Department of Statistics, the Singapore Police Force and all other agencies in the publication of this Report.

Summary

In 2019, there were 39,279 occurred live births. There were 21,446 deaths and 73 still births registered. When compared to 2018, there was an increase of 0.6% in live births and 0.8% in deaths registered.

Note: Percentage figures used in the report may not add up to 100 percent due to rounding.

Perinatal Mortality	134	3.5	134	3.4	127	3.2	97	2.5	
Still Births	99	2.6	99	2.5	89	2.3	73	1.9	

Note 1: Infant mortality refers to death of persons under one year of age. Crude infant mortality rate refers to the number of infant deaths per thousand live births. From 1980 onwards, this rate is based on resident live births only.

Note 2: Neonatal mortality refers to death of persons under 28 days of age. Crude neonatal mortality rate refers to the number of neonatal deaths per thousand live births. From 1990 onwards, this rate is based on resident live births only.

Note 3: Perinatal mortality refers to still birth and death of persons under seven days of age. Crude perinatal mortality rate refers to the number of perinatal deaths per thousand live births and still births.

Note 4: For more info please refer to explanatory notes on page 26 - 27.

General

The Immigration & Checkpoints Authority (ICA) administers the Registration of Births and Deaths Act (Chapter 267). Under this Act, all live births, deaths and still births occurring within Singapore and its territorial waters are required to be registered within the stipulated period. The Registry also re-registers births under the Adoption of Children Act (Chapter 4).

2 In 2019, 39,279 live births, 21,446 deaths and 73 still births were registered. In this report, date of occurrence is adopted for the compilation of births statistics while date of registration is adopted for deaths statistics.

Late Registrations

3 Live births registered after 42 days from occurrence are classified as late registrations. In 2019 there were 82 late registrations of live births. Of these, 13 cases were registered after a lapse of 12 months from the date of birth.

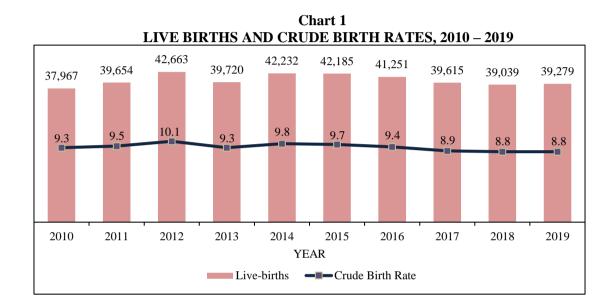

4 Deaths registered after three days from occurrence are treated as late registrations. In 2019, there were 80 late registrations of deaths. Of these, 47 cases were registered after seven days from the date of death.

Re-Registration of Adopted Children

5 Under the Adoption of Children Act, the birth of a child shall be registered under the Registration of Births and Deaths Act upon an Adoption Order issued by the Court. If the child's birth had previously been registered under the Registration of Births and Deaths Act, the name of the child, as well as the names and other particulars of the adoptive parents, as recorded in the Adoption Order, are entered in the birth register in place of the natural or last adoptive parents of the child. In 2019, 218 children were adopted and registered under the Act.

Live Births

The number of live births was 39,279 in 2019, showing an increase of 0.6% 6 compared with 39,039 in 2018. The crude birth rate was 8.8 per 1,000 Singapore residents which was the same as that for 2018 (Chart 1).

7 Among the newborns, 23,305 (59.3%) were Chinese, 7,615 (19.4%) Malays, 4.210 (10.7%) Indians and 4.149 (10.6%) of newborns were of other races. In 2019, Malays registered the highest birth rate of 14.0 per 1,000 residents followed by Indians at 8.7 per 1,000 residents. Chinese registered the lowest rate of 7.6 per 1,000 residents.

Chart 2

Live Births

Teenage Births

8 There were 280 live births born to teenagers aged 19 and below in 2019, a reduction of 3.1% as compared with 289 in 2018. By proportion, 27.9% of teenage births were born to Chinese, 59.3% to Malays, 9.6% to Indians and 3.2% to other ethnic groups.

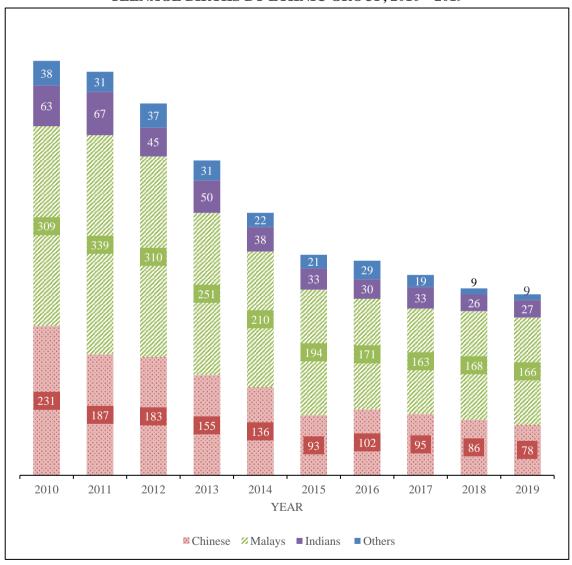

Chart 3 **TEENAGE BIRTHS BY ETHNIC GROUP, 2010 – 2019**

Live Births

Single Parent Registration Births (SP Births)

9 In 2019, 380 live births were registered without the father's name (Chart 4). Out of these 380 SP births, 96 (25.3%) births were born to teenagers aged 19 and below.

10 As similarly observed in teenage births, Malays made up the largest proportion of SP births.

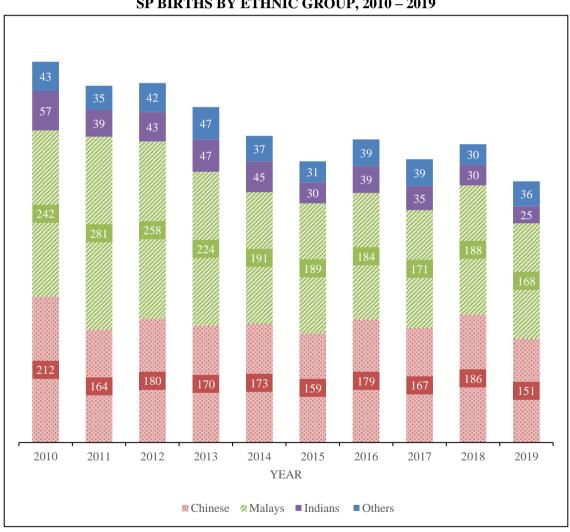

Chart 4 SP BIRTHS BY ETHNIC GROUP, 2010 - 2019

Live Births

Birth Order

Live births in 2019 comprised 47.2% 1st order, 35.3% 2nd order, 12.0% 3rd order 11 and 5.4% 4th & higher order births (Chart 5).

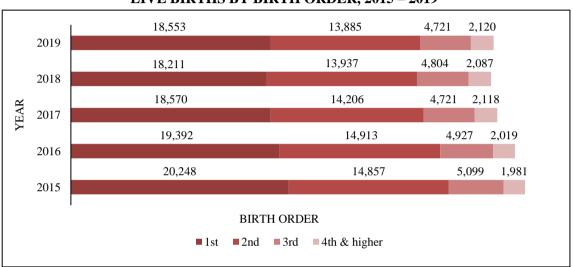

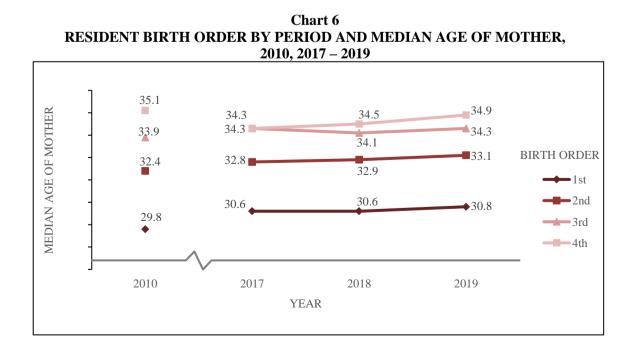

Chart 5 LIVE BIRTHS BY BIRTH ORDER, 2015 - 2019

Based on the resident birth order figures, it seems that women have been delaying 12 the birth of children till a later age. The median age of mothers showed increases across the 1st, 2nd and 3rd order births when compared against 2010 (Chart 6).

Live Births

First Time Mothers

13 The median age of resident live births for first time mothers was 30.8 years at the time of giving birth. Chinese, Malay and Indian mothers have their first child at 31.4, 28.1 and 29.6 years, respectively. The median age at which mothers from other ethnic groups have their first child is 31.2 years.

14 Among these first time mothers, 60.1% had university degrees and 39.9% had 'A' level or lower qualification.

Table II RESIDENT LIVE BIRTHS FOR FIRST TIME MOTHERS BY ETHNIC GROUP, FDUCATION AND OCCUPATION

Live Births

Type of Birth and Period of Gestation

15 38,228 mothers had single births, 513 had twins (including two with one live birth and one still birth) and 9 had triplets.

16 The modal gestation period for single births was 38 weeks which accounted for 33.4%. The modal gestation period for twin births was 37 weeks, accounting for 31.8% of total twin births. Premature single births, defined as births with gestation period of 36 weeks or less, totaled 2,520 (6.6%) of single births. The number of premature twins, with 36 weeks or less gestation period, accounted for 60.5% of twin births (Table III).

Table III LIVE BIRTHS BY PERIOD OF GESTATION AND TYPE OF BIRTH, 2019

Live Births

Birth Weight

17 Chart 7 reflects a strong tendency that twin births were generally lighter in weight than single births.

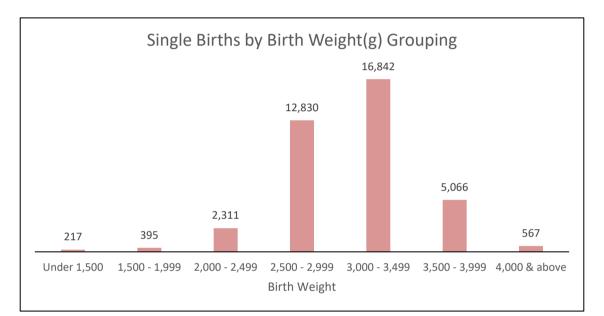

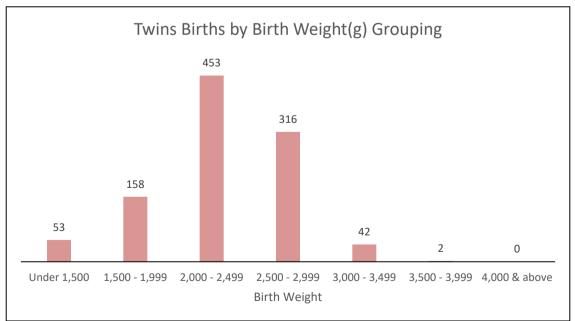

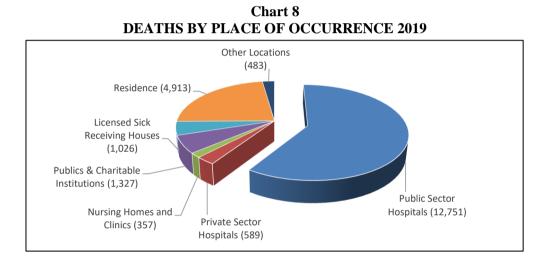

Chart 7 SINGLE AND TWIN LIVE BIRTHS **BY BIRTH WEIGHT, 2019**

Deaths

18 In 2019 a total of 21,446 deaths were registered, an increase of 164 (or 0.8%) as compared with 21,282 deaths registered in 2018.

Deaths that occurred in hospitals constituted 62.2% of the total (Chart 8); with 19 59.5% in public sector hospitals and 2.7% in private sector hospitals. Deaths in residence made up 22.9%, while 7.9% were in nursing homes and charitable institutions, 4.8% were in sick receiving houses and 2.3% at other locations.

Nationality

20 5.4% of deaths registered in 2019 were non-Singapore residents (Chart 9). They were mostly Malaysians and Indonesians.

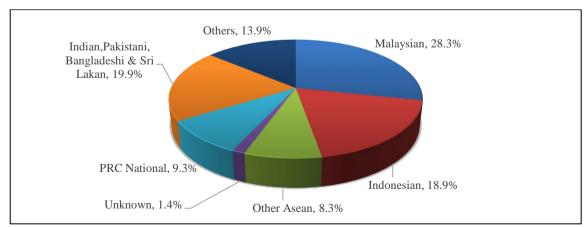

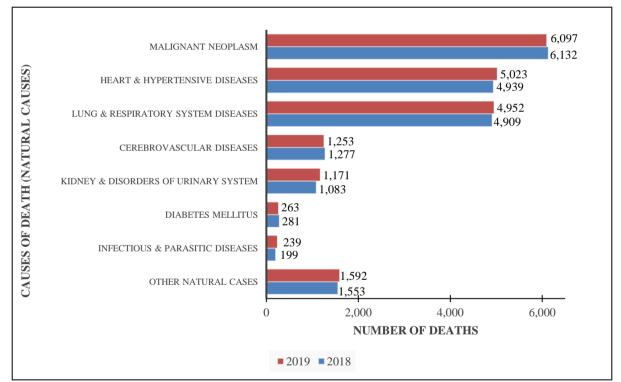

Chart 9 **DEATHS BY NON-RESIDENT STATUS, 2019**

Deaths

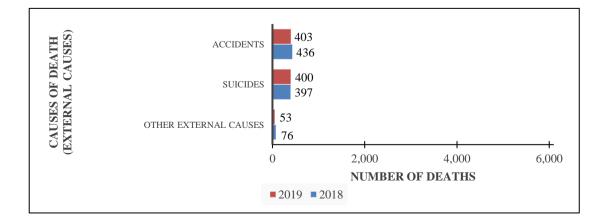

Major Causes of Death

21 In 2019, malignant neoplasms and heart & hypertensive diseases were the two common causes of death in Singapore. Altogether, they accounted for more than half (51.8%) of total deaths. Lung & respiratory system diseases and cerebrovascular diseases were another two prevalent causes responsible for 23.1% and 5.8% of death cases respectively. Unnatural causes such as accidents, suicides and other external causes made up 4.0%. As compared with the previous year (measured in terms of percentage), kidney & disorders of urinary system showed an increase of 0.4% while malignant neoplasms showed declines of 0.4% respectively.

COMPARATIVE MAJOR CAUSES OF DEATH BETWEEN 2018 AND 2019

Deaths

Median Age at Death and Gender

22 17,993 deceased persons in 2019 were aged 60 years and over and this accounted for 83.9% of the total deaths. Persons aged between 50 and 59 years old accounted for 8.9% of the total deaths while the number of Infant deaths (age less than one year old) is 75 or 0.3 % of total deaths (Chart 11).

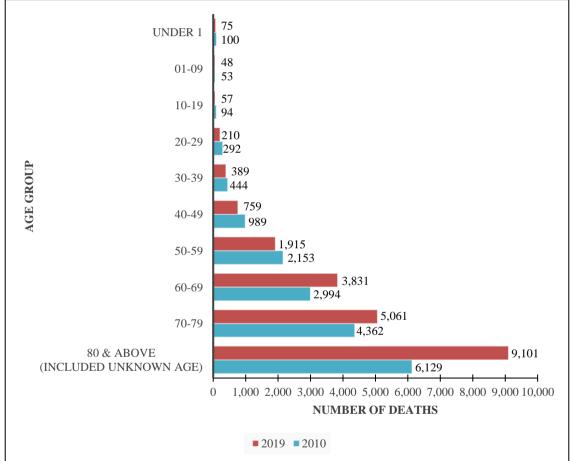

Chart 11 DEATHS BY AGE GROUP, 2010 and 2019

Deaths

Males outnumbered females in mortality, giving a ratio of 1,190 males to 1,000 23 females. In terms of causes of death, males registered a higher proportion in heart & hypertensive diseases and accidents while females registered a higher proportion in kidney & disorders of urinary system and cerebrovascular diseases (Chart 12).

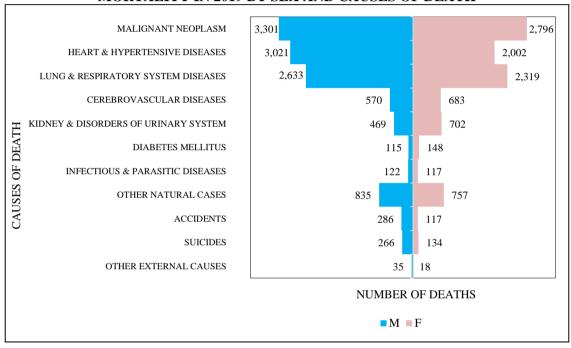

Chart 12 **MORTALITY IN 2019 BY SEX AND CAUSES OF DEATH**

The median age at death (MA in short) was 77.4 years in year 2019. The highest 24 MA of 84.2 years was recorded for those who died of lung & respiratory system diseases, followed by 82.3 years for kidney & disorders of urinary system and 78.9 years for cerebrovascular diseases.

25 The MA has been gradually lengthening over the years. It was 74.4 years in 2010. It increased to 75.5 years and 77.4 years in 2014 and 2019 respectively. Not including other natural causes, the increase in MA was most conspicuous among diabetes mellitus (71.7 year in 2010 to 77.4 years) and kidney & disorders of urinary system (79.0 years in 2010 to 82.3 years in 2019).

Females lived longer than their male counterparts. The MA was 73.7 years for 26 males compared to 80.7 years for females, a difference of 7.0 years. The sex differential in MA changed little over the years and it occurred across all major causes of death.

Table IV COMPARATIVE MEDIAN AGE AT DEATH BY CAUSES AND SEX

Deaths

Ethnic Group

27 75.5% of deaths registered in 2019 were Chinese while Malays, Indians and other ethnic groups made up of 14.3%, 8.0% and 2.3% of death cases respectively (Chart 13).

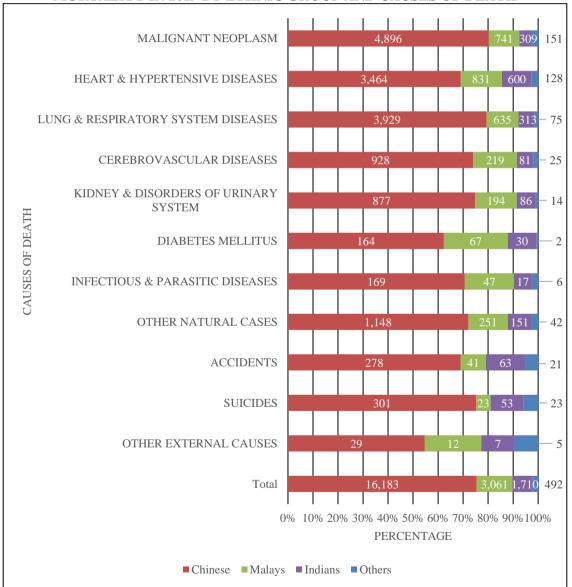

Chart 13 MORTALITY IN 2019 BY ETHNIC GROUP AND CAUSES OF DEATH

Deaths

28 Table V shows that there were differences in the MA among different ethnic groups. The MA for Chinese was 78.9 years compared with 71.7 years for Malays, 69.3 years for Indians and 66.0 years for other ethnic groups. The gap in MA between Chinese and non-Chinese ethnic groups existed in all major causes of death.

AND ETHNIC GROUP, 2019									
Cause of Death	ALL	Chinese	Malays	Indians	Others

Table V THE MEDIAN AGE AT DEATH BY MAJOR CAUSES OF DEATH AND FTHNIC CROUP 2019

Deaths

Infant Mortality

29 Of the 75 infant deaths registered in 2019, 39 were males and 36 were females. The main causes of infant death were Perinatal Originated Conditions (41.3%) and Congenital Anomalies (24.0%). The infant mortality rate in 2019 was 1.7 per 1,000 resident live births (Chart 14).

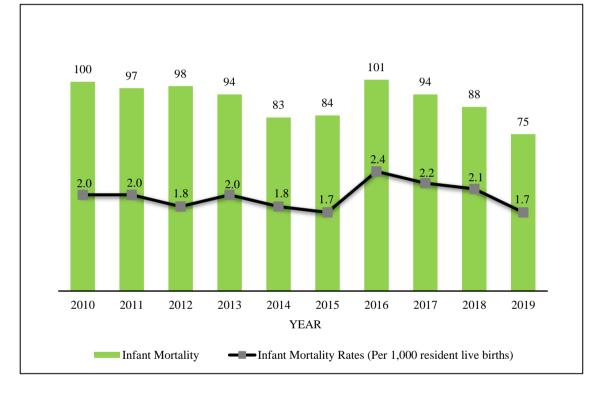

Chart 14 **INFANT MORTALITY RATES, 2010 – 2019**

Neonatal Mortality

30 The number fell from 53 in 2010 to 31 in 2019. The neonatal mortality rate also dropped from 1.1 per 1,000 resident live births in 2010 to 0.6 per 1,000 resident live births in 2019.

Perinatal Mortality

31 Including still births, there were 97 perinatal deaths registered in 2019. The perinatal mortality rate was 2.5 per 1,000 live births and still births.

Maternal Mortality

32 In 2019, there was one maternal death registered.

Still Births

33 The percentage of still births registered in 2019 decreased by 18.0% to 73 as compared to 89 in 2018. Chart 15 shows that the crude still births rates varied between 1.9 to 2.7 per 1,000 live births and still births for the last 10 years.

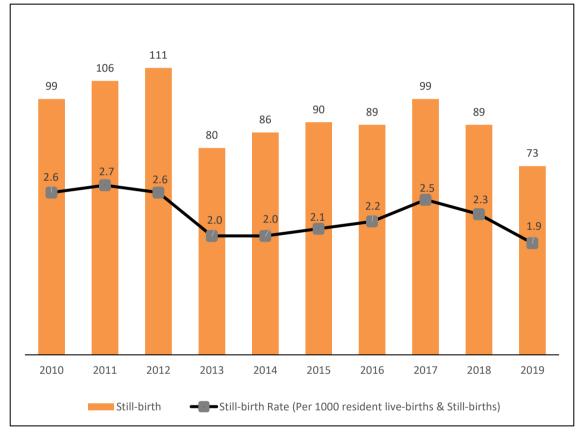

Chart 15 STILL BIRTHS RATES, 2010 - 2019

34 Still births registered in 2019 comprised 36 males and 37 females. Still births in excess of 36 weeks of gestation period constituted 30.1% of total still births.

ANNEXURE

PROCEDURES FOR THE REGISTRATION OF LIVE BIRTHS, DEATHS AND STILL BIRTHS

LIVE BIRTHS

All live births occurring in Singapore can be registered¹ at one of the following Birth Registration Centres stated below:

- a Registry of Births and Deaths at the ICA Building;
- b Gleneagles Hospital;
- c KK Women's and Children's Hospital;
- d Mount Alvernia Hospital;
- e Mount Elizabeth Hospital;
- f Mount Elizabeth Novena Hospital;
- g National University Hospital;
- h Parkway East Hospital;
- i Raffles Hospital;
- j Singapore General Hospital; or
- k Thomson Medical Pte Ltd.

2 The following documents are required to be produced at the time of birth registration:

- a Identification Documents of both parents i.e. Singapore Pink Identity Card or Foreign Travel Document (with their Singapore Blue Identity Card or Long Term Pass Card issued by ICA, if applicable); and
- b Original Marriage Certificate of parents.

3 The Certificate of Registration of Birth is prepared in 2 copies. One copy is retained by the Registrar while the other copy is laminated and issued to the informant. The fee for a birth certificate is S\$18.00. For births registered at the respective maternity hospitals, these centres may charge an additional administrative fee on top of the fee for a birth certificate.

4 All live births must be registered within 14 days. Registrations effected after 14 days but before the expiry of 42 days are classified as Delayed Registrations. Registrations after the expiry of 42 days are classified as Late Registrations.

¹ Effective June 2018, eligible parents can register their child's birth via the Moments of Life app. Parents will then only need to report to any of the birth registration centres to collect the birth certificate. To be eligible, one parent must be a Singapore citizen, both parents must have SingPass accounts and have their marriage registered in Singapore.

DEATHS

5 Deaths which occur in government restructured hospitals can be registered at the respective hospitals. Deaths which occur elsewhere in Singapore are registered at the Registry of Births and Deaths or any of the Police Divisional Headquarter/Neighbourhood Police Centre or Post. The following documents are required to be produced for registration:

- a Certificate of Cause of Death issued by a medical practitioner;
- b Identification Document of deceased, i.e. Singapore Pink Identity Card or Foreign Travel Document (with their Singapore Blue Identity Card or Long Term Pass Card issued by ICA, if applicable);
- c Singapore Passport of deceased;
- d Birth Certificate or Certificate of Citizenship of deceased, where applicable; and
- e Identification Document of the Informant, i.e. Singapore Pink Identity Card or Foreign Travel Document (with their Singapore Blue Identity Card or Long Term Pass Card issued by ICA).

6 A death which has occurred at home and is not attended by a doctor must first be reported to the Police who will make arrangements for an authorised medical practitioner to examine the body. The medical practitioner will issue a Certificate of Cause of Death if he is satisfied that the death is due to natural causes. The death must then be registered at the Registry of Births and Deaths or any of the Police Divisional Headquarter/Neighbourhood Police Centre or Post. The documents required to be produced for registration are as mentioned in Paragraph 5 above.

7 The Certificate of Registration of Death, together with the attached Burial/Cremation Permit, is prepared in 2 copies. One copy is issued to the informant and the other copy is retained by the Registrar. An acknowledgement slip for the documents (as mentioned in paragraph 5b, c and d) surrendered will be issued to the informant. All documents invalidated are returned to the informant.

8 No fee is required for the registration of a death. If the body of a deceased is to be exported to another country, an Export Permit must be obtained from the Port Health Officer, Ministry of the Environment and Water Resources. The Export Permit can only be obtained after the death has been registered.

9 All deaths in Singapore must be registered within three days of occurrence. Death registrations after three days are classified as Late Registrations.

STILL-BIRTHS

10 Still-births which occur in government restructured hospitals are registered at the respective hospitals. Still-births which occur elsewhere in Singapore are registered at the Registry of Births and Deaths or any of the Police Divisional Headquarter/Neighbourhood Police Centre or Post. The following documents are required to be produced for registration:

- a Notification of Still-birth issued by a doctor;
- b Identification Documents of both parents i.e. Singapore Pink Identity Card or Foreign Travel Document (with Singapore Blue Identity Card or Long Term Pass Card issued by ICA, if applicable); and
- c Identification Document of the Informant, i.e. Singapore Pink Identity Card or Foreign Travel Document (with Singapore Blue Identity Card or Long Term Pass Card issued by ICA).

11 Upon registration, a Permit to Bury or Cremate Body and an acknowledgement slip for the documents surrendered are issued to the informant while the Certificate of Registration of Still-birth is retained by the Registrar. No fee is required for the registration of a still-birth.

12 All still-births must be registered within 14 days.

EXPLANATORY NOTES

EXPLANATORY NOTES

- *Resident population* refers to Singapore citizens and permanent residents. Data from 2003 onwards exclude residents who have been away from Singapore for a continuous period of 12 months or longer as at the reference period.
- *Annual population growth rate* refers to the annual population increase per thousand population, and is based on Singapore residents only. For 2003, the annual population growth rate is computed based on 2003 unrevised population estimates.
- *Sex ratio* refers to the number of males per thousand females and is based on Singapore residents only.
- *Natural increase* refers to the excess of births over deaths.
- *Crude rate of natural increase* refers to the natural increase per thousand population. From 1980 onwards, this rate is based on Singapore residents only.
- 6 A *live birth* refers to an infant, irrespective of the duration of gestation, which after the complete expulsion or extraction from its mother, breathes or shows any other signs of life. From 1953 onwards, the figures are based on date of occurrence. Prior to 1953, they are based on date of registration.
- *Crude birth rate* refers to the number of live births per thousand population. From 1980 onwards, this rate is based on Singapore residents only.
- *Birth order* refers to the numerical order of a child in relation to all previous live births of its mother.
- *Period of gestation* refers to the number of weeks a baby remained in its mother's womb before birth.
- 10 A *premature birth* refers to a birth with less than 37 weeks of gestation.
- 11 A *death* refers to the permanent disappearance of all signs of life of a living person at any time. Death figures referred to the number of deaths registered during the year.
- *Crude death rate* refers to the number of deaths per thousand population. From 1980 onwards, this rate is based on Singapore residents only.
- *Infant mortality* refers to death of persons under one year of age.

- *Crude infant mortality* rate refers to the number of infant deaths per thousand live births. From 1980 onwards, this rate is based on resident live births only.
- *Neonatal mortality* refers to death of persons under 28 days of age.
- *Crude neonatal mortality rate* refers to the number of neonatal deaths per thousand live births. From 1990 onwards, this rate is based on resident live births only.
- *Perinatal mortality* refers to still birth and death of persons under seven days of age.
- *Crude perinatal mortality rate* refers to the number of perinatal deaths per thousand live births and still births.
- *Maternal mortality* refers to deaths of mothers owing to deliveries and complications arising from pregnancy, childbirth and puerperium.
- *Crude maternal mortality rate* refers to the number of maternal deaths per hundred thousand live births.
- 21 A *still birth* refers to an infant born after a minimum of 28 weeks of gestation, which after expulsion or extraction from its mother, does not breathe or show any signs of life. Still birth figures referred to the number of still births registered during the year.
- *Crude still birth rate* refers to the number of still births per thousand live births and still births.
- *Resident live-births* refer to those with at least one parent who is Singapore citizen or permanent resident.
